Portfolio

Education

- B.S. Software Engineering | Milwaukee School of Engineering | GPA: 3.92
Est. Graduation : May 2027

Prior Experience

- Independent Game Developer | 2015 – Present
 - o Independently developed a number of 2D video games and experimental projects
- Automation Engineer Apprentice | Krueger International | Jul 2022 – Dec 2023
 - o Troubleshoot and maintained automated robotic systems to minimize downtime and maintain production flow
 - o Programmed and modified robot control logic to optimize machine performance
 - o Assisted with mechanical and electrical integration tasks on manufacturing equipment
- Parks Maintenance LTE | Brown County Parks | Jun 2024 – Aug 2024
 - o Performed a variety of tasks related to park maintenance
 - o Fixed and improved a firewood vending machine using my automation skills

Skills

- | | | |
|--------------|------------------------------|-----------------------|
| - Java | - Object Oriented Design | - Operating Systems |
| - JavaScript | - Web App Development | - Algorithms |
| - C/C++ | - Agile Software Development | - Design Patterns |
| - Lua | - Software Verification | - Cyber Security |
| - Python | - Version Control (GIT) | - Computer Networking |

Leadership

Chair | MAGE | September 2023 – Present

- Host, organize, and promote games various board games

Projects

The Trials

- Built a puzzle platformer in Java using JavaFX
- Implemented custom a file parser that reads .txt files and converts them into levels made up of highly customizable components
- Implemented modular logic gates using the observer design pattern
- Created graphics used throughout the game

3D Engine

- Developed an interactive program that renders 3D coordinate data within a 2D display
- Developed mathematical transformations to project 3D coordinates onto a 2D plane
- Added interactive controls to adjust the position and orientation of the view
- Programed to be reusable, forming a foundation for future development

PLIPS

- Contributed to development of an IDE for assembly languages aimed at beginners
- Participated in an environment utilizing professional practice
- Debugged and resolved software defects
- Developed a visualization module to illustrate CPU bit flow during program execution
